A CARD.

NORTH PLATTE, June 13th. The celebration of July 4th, in North Platte promises to be a grand affair. The business men of the city have responded nobly to the call for funds to properly observe the day and the committee having the exercises in charge most respectfully request all societies, churches or individuals to not furnish refreshments upon that day, as we believe the people who are in that line of business deserve the patronage of the public.

E. B. WARNER,
F. T. REDMOND,
W. H. FIKES,
P. H. SULLIVAN,
L. PETERSON,

—See Fair ad. 2d page.

—Richards Bros. have ordered a one hundred dollar bicycle for Arthur Plumer, of Maxwell.

Mrs. Richard Sharp, of Grand Island, who had been visiting Mr. and Mrs. John Worthy and other North Platte friends, returned home today.

The Fourth of July committee held a meeting last evening but found they were not quite ready to formulate the programme of sports for the day.

—Mr. and Mrs. C. M. Newton on Wednesday evening rode their wheels over the course of the coming road race in forty-nine minutes. The distance is about nine miles.

—One of the features of the parade on the 4th of July will be a number of highly decorated floats. Quite a number of business men have signified their intention of being thus represented in the parade.

—Through the rains this season have been sufficient to insure crops. Windmill irrigation has not been lost sight of by upland farmers, and many of them are actively discussing the question. The Van Brocklin brothers, who reside nineteen miles southeast of town are putting in an irrigation plant where the depth of well is 180 feet. They believe that as far as the extra power is concerned that is required to lift water from this depth, that by the use of two columns of water and two pumps, the weight of first column of water can be made to overcome the weight of the second, and in this way a large quantity of water can be lifted with the minimum of power. Some figures have been given showing what can be done by pumping water different depths. A 12 foot mill with reservoir will irrigate five acres of land when pumping from the depth of two hundred feet. From the same depth a sixteen foot mill will lift water enough to irrigate ten acres and by putting in a winter crop as high as twenty might be thus watered. The secret of successful windmill irrigation will be found in the reservoir system and as our farmers learn how to thus handle their water economically we may expect an era of steady permanent prosperity to ensue, and the uplands will steadily move forward in the race for prosperity with the low lands, where canal irrigation is the exclusive means used.
